

Ideation Phase Customer Journey Map

Date	04 July 2026
Team ID	
Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	4 Marks

Customer Journey Map — Electricity Consumption Analytics (Tableau)

Persona: Energy Policy Analyst | Scenario: Discovering, preparing, analyzing, and sharing 2019–2020 consumption insights in Tableau

	Discover How does the analyst become aware of the dataset and task?		Prepare What happens while cleaning and structuring the data?		Analyze What happens in the core exploration moments?		Build & Share How does the analyst turn insight into something shareable?		Extend What happens after the core experience?	
Steps	Assigned the 2019–2020 state-wise consumption dataset	Explores the raw CSV structure (33 states, 5 regions, 2019–2020)	Cleans and validates data in Tableau Prep	Creates calculated fields (lockdown flag, YoY growth)	Builds a national trend chart across 2019–2020	Compares regional patterns across NR/SR/ER/WR/NER	Assembles an interactive dashboard with filters	Builds a guided Tableau Story (3 scenarios)	Publishes the dashboard to Tableau Public/Server	Presents findings to policymakers for planning
Interactions	Project brief, dataset handoff (CSV file)	Excel / Tableau data preview	Tableau Prep Builder	Tableau calculated field editor	Tableau Desktop worksheets	Regional bar chart, bubble map	Tableau dashboard authoring	Tableau Story authoring	Tableau Public / Server publishing	Live presentation, embedded dashboard
Goals & motivations	Help me understand what questions this data can answer	Help me see what fields and time range I'm working with	Help me trust that the data is accurate	Help me segment the data by time period easily	Help me see the overall shift at a glance	Help me spot which regions differ most	Help me let others explore the data themselves	Help me explain findings without a live walkthrough	Help me make this accessible to stakeholders	Help me make the case for data-backed decisions
Positive moments	Excited about a real, COVID-era dataset	Impressed by the geographic coverage		Satisfying once the flag logic works	The lockdown dip is clearly visible	Bubble map makes regional scale differences obvious	Filter actions make the dashboard feel alive	Story flows naturally through the 3 scenarios	Publishing is quick once the workbook is ready	Stakeholders engage with the story's 3 scenarios
Negative moments		Surprised 2020 has far fewer reported rows	Inconsistent state name spellings slow things down	LOD expressions are tricky to get right	Chart is noisy before filtering to monthly view	Hard to compare more than two regions at once	Performance dips with all filters active at once		Some formatting shifts after publishing	Follow-up questions need data not yet visualized
Areas of opportunity	Provide a short data dictionary up front	Flag reporting-frequency gaps automatically	Auto-suggest fixes for name mismatches	Provide reusable calculated-field templates	Add a lockdown-period shaded overlay	Add a small-multiples regional view	Optimize with an extract instead of live data	Add narrative captions to each story point	Preview the published layout before publishing	Publish a public roadmap for future updates
