Project Name	Plugging into the Future: An Exploration of Electricity Consumption Patterns
Maximum Marks	4 Marks

Customer Journey Map — Electricity Consumption Analytics Platform

Persona: State Electricity Grid Planner | Scenario: Discovering, onboarding to, and using the forecasting & dashboard platform

	Discover How does the planner become aware of the platform?		Onboard What happens as they start using it?		Analyze What happens in the core, daily-use moments?		Act How do they use insights to make decisions?		Extend What happens after the core experience?	
Steps	Hears about the platform in a department briefing	Sees a dashboard demo shared in a team channel	Requests access & credentials	Connects or uploads state consumption data	Views the real-time regional dashboard	Runs a demand forecast for the coming week	Flags an upcoming regional peak-load risk	Shares a forecast report with the operations team	Reviews the platform's forecast accuracy	Requests a renewable-overlay feature
Interactions	Conversation with a colleague / manager	Screenshot / recording shared on Slack/Teams	Admin console, email approval	Data ingestion service, CSV upload UI	Web app dashboard, API gateway	Forecasting service (Prophet / XGBoost)	Alerting service (email / in-app)	Export to PDF/Excel, email	Accuracy report within the app	In-app feedback form
Goals & motivations	Help me find a better way to track demand	Help me see if this is worth my time	Help me get set up without delay	Help me trust that my data loaded correctly	Help me compare regions at a glance	Help me plan ahead with confidence	Help me act before an overload happens	Help me communicate clearly and quickly	Help me see if I can rely on this long-term	Help me plan for future infrastructure
Positive moments	Excited that a dedicated tool might exist	Impressed by the regional heatmap view		Clear success message after upload	Loves the color-coded regional heatmap	Forecast matches past actuals closely	Alert arrives with enough lead time	Report looks polished and ready to send	Forecasts stayed within 5% of actuals	Feels heard when feedback is acknowledged
Negative moments		Unsure if it covers their own state	Waiting on manual account approval	Upload fails silently on malformed rows	Chart is slow on a 5-year date range	Model struggles during festival-week spikes	Too many alerts feel like noise some weeks			No visibility into feature roadmap
Areas of opportunity	Could we demo the tool proactively each quarter?	Add a short guided tour video to the demo	Enable self-service sign-up with SSO	Show a validation summary before final import	Add caching for common queries	Add festival/holiday seasonality flags	Let users tune their own alert thresholds	Add one-click share to Teams/Slack	Publish a public accuracy scorecard	Share a public roadmap page
